Item Information API documentation

Introduction

This guide is designed to help developers use and take advantage of the API to get detailed information about items."

Endpoint:

GET <https://api.vitecauto.no/api/product/info>

Parameters:

- Products** (required): A pipeline(|) separates alpha and artikkel number
For example, MEK|11 or MEK%7C11.

To ship multiple items, they should be semicolon (;) separated.
Example: MEK|11; MEK|10
- CustomerNumber** (required): The customer number associated with the request.
Example: 500190.

Authentication:

To ensure safe access, developers must include the following header parameters:

- accept**: Specifies the desired format for the response. Set to **application/json or XML**
- x-api-key**: API key provided by VitecAuto for authentication.

Eksempel Curl :

One item :

```
curl -X 'GET' \  
  'https://api.vitecauto.no/api/product/info?products=MEK%7C11&CustomerNumber=500190' \  
  -H 'accept: application/json' \  
  -H 'x-api-key: Din key'
```

More then one item:

```
curl -X 'GET' \  
  'https://api.vitecauto.no/api/product/info?products=MEK%7C11%3BMEK%7C10&CustomerNumber=500190' \  
  -H 'accept: application/json' \  
  -H 'x-api-key: Din key'
```

Response:

The API will correspond with product information in JSON format or XML, including key information such as product alpha, article number, description, price and inventory, etc

```

Error message:

1. Error message for non-existent alpha/article number combination:

```
{
  "message": "mek|111: alfa/artnr combination does not exist"
}
```

- **HTTP-statuskode:** "MEK|19: alfa/artnr combination does not exist"
- **Description:** This error message indicates that the specified combination of alpha and article number does not exist in the system.

2. Error message in case of non-registration with supplier:

```
{
  "message": "kunde ikke registrert hos levrاندør"
}
```

- **http-statuskode:** 400
- **Description:** This error message indicates that the customer is not registered with the vendor. It may be necessary to check customer number.

In case of 401 error due to missing API key, you can include the following:

3. Error message for missing API key:

```
{
  "message": "You are not allowed to use this companyld"
}
```

- **HTTP-statuskode:** 401
- **Description:** This error message indicates that the request was rejected because it was missing a valid API key. Be sure to include a valid key in your request to access the service.
